

Homework 1

Due Thursday, February 7, in class.

Name: _____

The code below makes up a simple Web page.

- **Draw a box** around all the opening tags.
- **Circle** all the closing tags.
- **Underline** all the attributes
- **Draw an arrow** to indicate which two closing tags are in the wrong order.

There are some tags and attributes that we have not covered. You do not need to know what they do to complete this assignment. The goal is to recognize tags and attributes even if you do not know their function.
